NTIS Prices: PC A04/MF A01

Country of Publication: United States

Contract No.: NCC3-308; RTOP 584-03-11

This paper presents a brief report on the application of Radial Basis Function Neural Networks (RBFNN) to the prediction of sensor values for **fault detection** and **diagnosis** of the Space Shuttle's Main Engines (SSME). The location of the Radial Basis Function (RBF) node centers was determined with a K-means clustering algorithm. A **neighborhood operation** about these center points was used to determine the variances of the individual processing notes.
